

Herbicides at Frank Gazdag's Pasture
Project #: 2009B
Cooperator: Frank Gazdag
By: Grey Wooded Forage Association
Funding: Agriculture Opportunities Fund (AOF)

Back in 2006, Frank had the north part of the pasture sprayed with Grazon and the south part sprayed with Express. In June 2009, Frank phoned me and suggested that this might be an opportunity for a small project.

Frank had already had his stocker cattle graze the pasture once in May. We took yield clips in June and August, just prior to the second and third grazings.

The results are interesting. Even after three years, treated areas produced more than untreated areas. Higher yield in the south part of the pasture could be because the area is lower, wetter ground. We hope to measure these differences again in 2010.

Frank Gazdags Yield Clippings (June 2009)

Frank Gazdags Yield Clippings (August 2009)
